# SAFETY FIRST

Our safety bolt-ons such as the StopSafe and DoorSafe have been specifically designed to give passengers and operators added peace of mind.

## StopSafe Barrier

The StopSafe is a manually operated high strength barrier which can be easily and quickly installed to ensure the highest levels of walking and wheelchair passenger safety. The device can be either transported within the vehicle or kept at a convenient location.

A StopSafe can be shared between old and new lifts (newer lifts likely to be wider). The StopSafe can be easily retro-fitted to both older and new lifts within an hour.

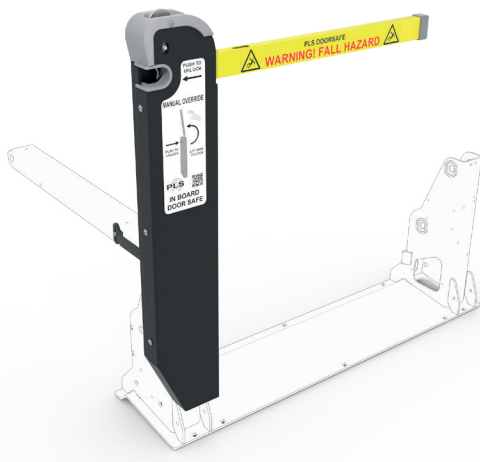

When you're storing the StopSafe, plastic plugs can be used for added safety within the platform slots that secure it.

The DoorSafe can be used with many different lifts and is suitable for moving between vehicles. The DoorSafe protects passengers and drivers when an accessible vehicle's rear doors are open. This barrier arm can be automatically activated before a passenger lift is operated so that the rear vehicle aperture is appropriately blocked.

The latest generation DoorSafe has an aesthetic design with high visibility colours and a clearly legible safety sign. When required, the barrier will power down in a smooth manner and for additional safety, it incorporates a simple manual override. Its arm is rubber coated for enhanced durability and easy gripping if required.

The DoorSafe can be retro-fitted or installed as part of a new vehicle build and there are 12 and 24 volt models available.

## Inboard Lift DoorSafe

The Inboard Lift DoorSafe is the perfect addition to any of our Inboard lifts such as the iClass.

The Inboard Lift DoorSafe has been specifically engineered to act as a fixed, strong, physical barrier, used to protect passengers when the rear doors to a vehicle are open.

LED lights and clear warnings give operators peace of mind that passengers are safe at all times. LED lights are an optional extra with the Inboard Lift DoorSafe barrier.

The Inboard Lift DoorSafe is an automatic barrier with a manual override option. The manual override allows the barrier to be moved up and down in case sudden access is needed.
