

## The new, lighter access cassette lift

The new accessECO is an addition to the access range but features a 12Kg reduction in weight from the accessLITE. A further 8Kgs saving can be applied if the aluminium cassette option is taken, giving a total saving of 20Kg. A high efficiency brushless motor has been installed which reduces power consumption by up to 80%.

The accessECO is made from advanced high-strength steel, and redesigned components, making it the lightest and strongest lift in its class. It features a robust, stable and safe loading platform and a new, faster safety check.

**500Kg lifting capacity (400Kg as standard)**

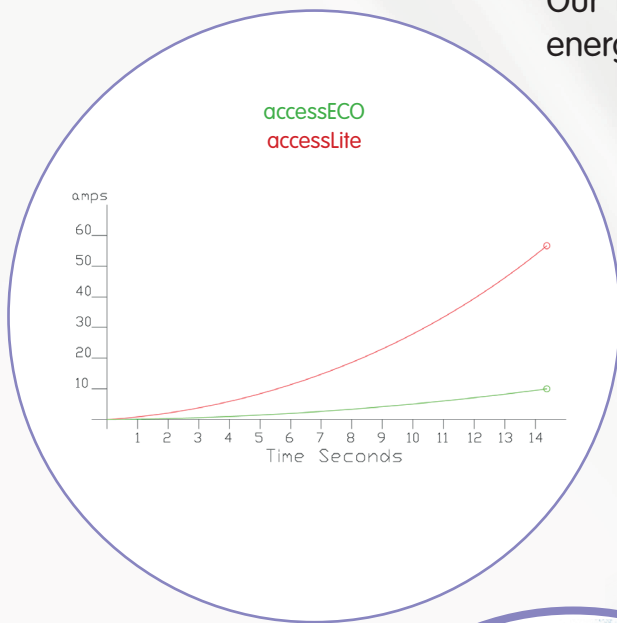

The accessECO has been featured as a lightweight component on the first electric minibus designed by London Hire and GM Coachwork.

Aluminium components including the full cassette box, all contribute to the 20Kg reduction in weight. A new extra-durable paint process and the first use of sustainable plastics ensure the accessECO is durable, eco-friendly and an excellent addition to any M1 or M2 vehicle.

Our new advanced hydraulic power system reduces energy requirement by up to 80%.

The accessECO is fully PSVAR, DDA, COIF, SVTA, BS EN 1756-2:2004, EEC2001/85 and A1:2009 compliant.

Compatible with our safety bolt-ons such as the DoorSafe and StopSafe barrier.

LED lights can be added for an extra cost on the accessECO and are a highly recommended safety feature. We have many optional extras for our cassette lifts including; audible warning devices, a remote control, a cycle counter, extendable handrails and a range of safety bolt-ons.

Platform sizes available: 825 x 1390mm to 925 x 1780mm.
